**PREMIUM
ROOF WINDOW**

The Premium is a range of high quality centrehung roof windows. These roof windows have a special slim wood profile, which allows more daylight into your room than competitor windows. The Premium range has a high quality gas filled thermo pane with 4 mm float glass, 17 mm gap with argon and 3 mm float glass. This pane has a very good energy performance at $U_g = 1.1 \text{ W/m}^2\text{K}$.

The Premium range has a special designed ventilation valve, which ensures that you have a proper ventilation in your room to enhance your well-being. This window has a great performance for the entire window at $U_w = 1.6 \text{ W/m}^2\text{K}$.

Premium is available as a normal centrehung roof window and also as a means of escape window with ventilation. The means of escape window is held open by a set of gas springs and this window is especially suitable for buildings, where an extra emergency exit might be needed.

The Premium window is suitable for all roofing materials - for an optimum installation please find the suitable flashing below. The window can be installed a roof pitch from 15-90 degrees.

It is very easy to install the roof window - even for the end user. Just use the graphic illustrations.

Manufacturing

Our production uses the latest and most innovative technologies and the factory is of course ISO 9001 certified.

Wood and finish

The knot-free wood has a clear coat of water-based acrylic lacquer, which gives it a natural appearance.

Ventilation

All windows are equipped with a ventilation valve, which meets the local building requirements.

Light

The slim-line design allows 10% more daylight into your house than competing roof windows.

Pane

Premium uses a high quality gas filled thermo pane with an excellent energy performance.

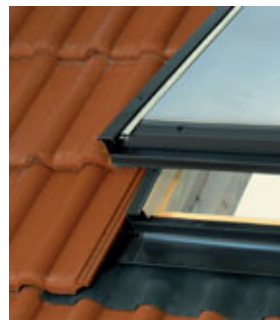

Handle

The window is bottom operated with a high quality handle made from moulded zinc. The handle has dual opening positions which allows more ventilation.

Premium has two types of high quality flashings, which fit all Premium roof windows.

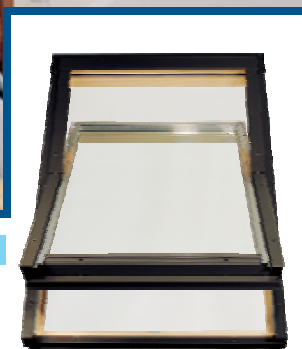

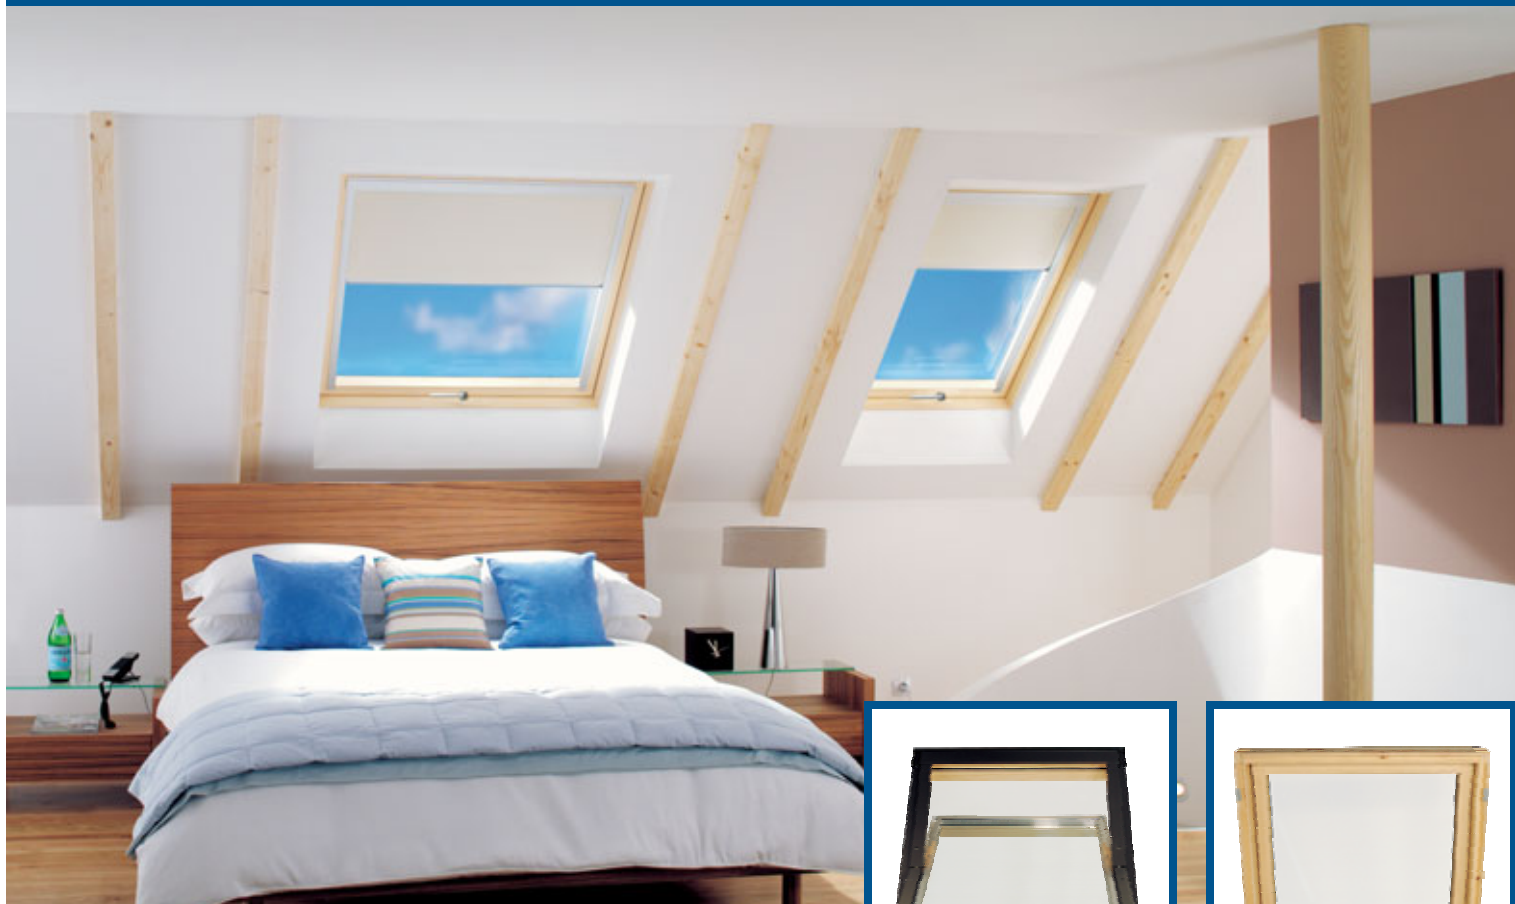

Both flashings are made of aluminium. The tile flashing is equipped with a lead apron and the slate flashing is equipped with a steel apron. Both aprons have been lacquered in amber grey for improved aesthetics. All flashings have been tested for complete water tightness under the most rigorous conditions.

The tile flashing (TF) fits all profiled roofing materials with a tile height of 16-90 mm.

The slate flashing (SF) fits all flat roofing materials with a height of 0-16 mm.
